

COMPENG 2SH4 Project – Statement of Contribution

Your Group Name Ohio Sigmas

Your Name Joshua Xue

Your Team Member's Name Aegir Wang

You must complete this statement of contribution without discussing it with your project partner, i.e., individually. Your statement should be concise (at most one-and-a-half page). It has three parts:

1. Tell us about your own contribution to the development of your COMPENG 2SH4 project. For example, you can tell us about which project iterations (as mentioned in the project manual) and C++ project classes that you worked on and completed. You can provide a concise answer either in paragraph form or through bullet points.

I did parts A for iteration 1 and 2 (iterations 1A 2A). As for iteration 3, we worked on it together. We met up in person to work on the code, but because we wanted to avoid git merge, git fetch, and git pull conflicts, only one person coded at a time while the other person watched. We often used each other's laptops to code though, so the commits don't exactly line up with our iteration progress.

2. Repeat Part 1 above but this time tell us about your project partner's contribution to the development of your COMPENG 2SH4 project.

My partner did iterations 1B and 2B, and I did iterations 1A and 2A. For iteration 3, we worked on it together.

3. Tell us about your experience in your first collaborated software development through this project – what was working and what wasn't. If you are a one-person team, tell us what you think may work better if you had a second collaborator working with you.

I think overall the project went well. However, working on the code simultaneously was more challenging than we expected due to potential conflicts with Git. Because of this, only one of us coded at a time and committed the code before the next person started working. In addition, we both had to find time in our schedules to meet up. This was slightly more complicated compared to our PPA projects as you could work on those whenever you wanted.
