

COMPENG 2SH4 Project – Statement of Contribution

Your Group Name __Ohio Sigmas

Your Name ____Aegir Wang

Your Team Member's Name ____Joshua Xue

You must complete this statement of contribution without discussing it with your project partner, i.e., individually. Your statement should be concise (at most one-and-a-half page). It has three parts:

1. Tell us about your own contribution to the development of your COMPENG 2SH4 project. For example, you can tell us about which project iterations (as mentioned in the project manual) and C++ project classes that you worked on and completed. You can provide a concise answer either in paragraph form or through bullet points.

I did the parts assigned to person B in the project manual, i.e. iterations 1B and iterations 2B. We have worked on iteration 3 together. However, to avoid merge conflicts and confusion, we worked each part together, making sure that we both understood the code written before moving on. When one person was coding, the other was providing suggestions as well as advice on various things such as variable names and etc..

2. Repeat Part 1 above but this time tell us about your project partner's contribution to the development of your COMPENG 2SH4 project.

As stated in Part 1, I did Iterations 1b and 2b while he did Iterations 1a and 2a, while we did iteration 3 together. However, the boundaries between our work are not very distinct since we were working on the project simultaneously.

3. Tell us about your experience in your first collaborated software development through this project – what was working and what wasn't. If you are a one-person team, tell us what you think may work better if you had a second collaborator working with you.

Our experience worked well. The important part is that both partners understood the code that was written, as that helped speed up development tremendously. However, it does require each person to be available at the same time, meaning it was trickier to find time to work on the project.
